E-commerce Sales Analysis Dashboard

1. Project Overview

The E-commerce Sales Analysis Dashboard is created using Microsoft Excel to analyze sales, profit, quantity, order performance, and profit margin. It provides a visual summary of business performance and helps users explore sales trends across different categories, regions, and customer segments.

2. Project Objectives

- Analyze overall sales and profit performance.
- Track year-over-year growth.
- Compare monthly sales and profit.
- Understand category-wise profitability and sales contribution.
- Identify the top five subcategories by sales.
- Analyze sales distribution across US states.
- Explore data using interactive filters.

3. Key Performance Indicators (KPIs)

The dashboard displays the following metrics:

KPI	Value
Total Sales	$22,97,200.86
Total Profit	$2,86,397.02
Quantity Sold	37,873
Number of Orders	9,994
Profit Margin	12.47%

The dashboard also displays year-over-year growth indicators for the KPIs.

4. Dashboard Visualizations

Sales and Profit Analysis

A monthly chart compares sales and profit from January to December to show changes in performance throughout the year.

Category-Wise Profit

This chart compares profit across Furniture, Office Supplies, and Technology.

- Furniture: $18.45K
- Office Supplies: $122.49K
- Technology: $145.45K

Category-Wise Sales Share

A doughnut chart displays each category's percentage contribution to total sales.

- Furniture: 32.30%
- Office Supplies: 31.30%
- Technology: 36.40%

Sales by State

A map visualizes sales distribution across states in the United States.

Top 5 Subcategories by Sales

The chart highlights the five highest-selling subcategories:

1. Phones — $330.01K
2. Chairs — $328.45K
3. Storage — $223.84K
4. Tables — $206.97K
5. Binders — $203.41K

5. Interactive Filters

The dashboard includes slicers for:

- **Year:** 2011, 2012, 2013, and 2014
- **Region:** Central, East, South, and West
- **Segment:** Consumer, Corporate, and Home Office

These filters allow users to explore sales performance for selected years, regions, and customer segments.

6. Tools and Features Used

- Microsoft Excel
- Data analysis and summarization

- PivotTables and PivotCharts
- Charts and map visualization
- Slicers and interactive filters
- KPI cards and dashboard formatting

7. Key Insights

- Technology has the highest profit among the three categories shown.
- Technology contributes the largest share of total sales at 36.40%.
- Phones and Chairs are the top two subcategories by sales.
- The monthly chart helps compare sales and profit across the year.
- Regional and segment filters make it possible to investigate performance in more detail.

8. Conclusion

This project demonstrates the use of Microsoft Excel to organize and visualize e-commerce sales data. The dashboard combines KPIs, charts, a map, and interactive filters in one place. It helps users monitor performance, compare product categories, identify leading subcategories, and explore geographical sales patterns to support informed business decisions.
